

The 100x Enterprise Software Development Age

Applied AI Software Development Masterclass

Abstract

Welcome to the age where every professional becomes a software creator.

The rules have changed. The barriers have fallen. We are entering an unprecedented era where AI doesn't just assist developers—it fundamentally reimagines who can build software and how fast they can ship it. This isn't incremental improvement. This is the 100x Developer Age, and this full-day immersive masterclass is your gateway to leading it.

Prepare for a hands-on deep dive into the most powerful AI-native development ecosystem ever assembled. You'll command an arsenal of transformative platforms—Claude Code, OpenAI Codex, Cursor, Replit, V0, and Google Gemini—learning not just how to use them, but how to orchestrate them for maximum enterprise impact. By day's end, you won't just understand these tools. You'll have built production-ready web applications, mobile apps, and microservices with your own hands.

Beyond Tools. Into Methodology.

Raw AI power without structure is chaos. That's why this masterclass goes deeper—introducing you to battle-tested AI development frameworks that turn ambiguity into velocity. Master SpecKit for specification-driven development. Leverage OpenSpec for collaborative AI workflows. Deploy Claude Code PM for end-to-end project orchestration. These aren't theoretical concepts—they're the operational playbooks powering the next generation of software organizations.

Unlock the Extensibility Layer.

The 100x developer doesn't work alone. Learn to supercharge your AI assistants with Model Context Protocol (MCP) servers that connect to enterprise systems, custom Skills that encode organizational knowledge, and autonomous Sub-Agents that handle complex workflows while you focus on strategy. This is where AI development transcends individual productivity and becomes organizational transformation.

Full-Spectrum Software Lifecycle Coverage.

We're not just writing code—we're revolutionizing how software gets conceptualized, designed, documented, and delivered. Generate comprehensive Product Requirements Documents in minutes. Architect systems with AI-assisted High-Level and Low-Level

Designs. Auto-generate architecture diagrams that actually reflect your systems. Produce user guides and technical documentation at unprecedented speed. Then tackle the real-world grind: intelligent bug triage, AI-accelerated defect resolution, and seamless CI/CD pipeline automation.

Built for Every Role in the Software Organization.

This isn't a workshop for programmers. This is a masterclass for anyone who touches the software lifecycle. Developers will multiply their velocity. Product Managers will prototype in real-time during stakeholder meetings. Architects will explore design spaces at the speed of thought. QA Professionals will auto-generate test suites and edge cases. Program Managers will gain unprecedented visibility into technical feasibility. Technical Directors will discover their AI transformation roadmap. Product Owners will bridge the gap between vision and implementation instantly.

The Only Prerequisite? Familiarity with the Software Industry.

No programming knowledge required. No coding background necessary. If you understand what software is and why it matters to your organization, you're ready. Bring your laptop, bring your ambition, and prepare to redefine your professional capabilities.

What You'll Walk Away With:

- Hands-on command of six industry-leading AI development platforms
- Real applications you built yourself—web, mobile, and microservices
- Fluency in structured AI development methodologies
- Practical expertise in MCP servers, Skills, and Sub-Agent orchestration
- Ability to generate PRDs, HLDs, LLDs, architecture diagrams, and documentation
- Enterprise workflows for bug management and CI/CD automation
- A personal roadmap for becoming a 100x contributor in your organization

Eight hours. Six platforms. Three application types. One transformation.

The 100x Enterprise Software Development Age has arrived. Will you lead it?
